MOOD MAP

POLI MAP

- Top 5 words exhibited in county will appear with the # of inmates on death row
- Spectrum: Acceptance/ Remorse to Denial/ Claiming Innocence

- Political statistics for each county
- Spectrum: private vs public prisons distributed across counties

Focus & Zoom: Example of Mood Map

When a user clicks on the county, a menu of the top 5 words gathered from the inmates that belong to that county will appear. which conveys a spectrum of the intensity of words from the inmates in that county, the top words used will appear.

When a user hovers over a county, the name and number of inmates in that county will appear.

Discussion

Advantages:

- Gives users the opportunity to compare the data from the maps by associating county politics with popular mood of inmates' last words

Disadvantages:

- Possible issues with defining the mood spectrum, failure in correlation
- Overload of information between the two maps and in each county
- Switching between maps
